What is Cued Speech?..

Cued Speech is a manual system, using eight handshapes in four positions near the mouth which represents the 44 phonemes (sounds) used in the English language. You Cue in 'real time' as you speak and talk normally to clarify lip patterns to assist lip reading.

With Cued Speech, lip reading levels can increase from about 35% to 96% accuracy, enabling deaf children and adults to see speech and so perceive and understand (one comes before the other) complete spoken language.

Cued Speech Chart
British English

Rule 1
Consonants on their own: Side placement

Rule 2
Vowels on their own: Handshape 5

Rule 3
Consonant followed by a vowel: **TO GE THER**

The chart displays 44 phonemes arranged in two rows. The top row (blue background) contains consonants: /zh/, /th/, /h/, /p/, /k/, /t/, /d/, /v/, /s/, /b/, /f/, /w/, /TH/, /l/, /m/, /n/, /g/, /ng/. The bottom row (red background) contains vowels: /ee/, /e/, /u/, /i/, /a/, /o/, /oo/, /at/, /ay/, /oy/, /ear/, /air/, /oh/, /ow/. Handshapes 1-8 are shown for consonants, and Handshape 5 is shown for vowels. Placements are indicated by dots on a face diagram: Mouth, Chin, Throat, Side (BFSD). Two Placements (Always end with handshape 5) are shown for the final two vowels.

You can help your deaf baby or child SEE every word that you say as clearly as a hearing child hears words.

Over 90% of deaf children are born to hearing families who use spoken languages in the home. If the hearing family learn to Cue, their deaf babies and children can see what they are saying and develop a fluent mental model of the home language. Over time this supports social and emotional growth and increasingly sophisticated thinking and communication which is vital for achieving full potential in all areas of life.

Why do we need Cued Speech?
